

# RBMP Water body information sheet for water body 100222 in Tay

## General details

|                             |   |
|-----------------------------|---|
| Water body name:            | Dunalastair Water   |
| Water body Identifier code: | 100222  |
| Area:                       | 1.45 km <sup>2</sup>  |
| Water body category:        | Lake  |
| Baseline:                   | Y   |
| River basin district:       | Scotland  |
| Area advisory group:        | Tay   |
| Catchment:                  | River Tay   |
| Associated protected areas: | River Tay - SPECIAL AREA OF CONSERVATION                              |
| Associated groundwater:     | Garry and Loch Rannoch bedrock and localised sand and gravel aquifers |
| Responsible body:           | SEPA<br>Perth   |
| Heavily modified:           | Yes   |
| Artificial:                 | No  |
| Typology:                   | Lowland<br>Large<br>Low alkalinity<br>Deep                            |
| National Grid Reference:    | NN 69716 58423  |
| Latitude:                   | 56.69928  |
| Longitude:                  | -4.12927  |

## Current status of this water body

We have classified this water body as having an overall status of Good ecological potential with Medium confidence in 2008 with overall ecological status of Bad and overall chemical status of Pass.

It is important to note that the five classification ecological potential classes for Heavily Modified Water Bodies (HMWBs) and Artificial Water Bodies (AWBs) combine the level of mitigation measures for water levels and flow and physical habitat with measurements of the biological and chemical water quality. For example, a HMWB could have all the mitigation measures in place for the use (eg hydropower) to allow it to reach good ecological potential, but if water quality is poor due to elevated phosphorus levels, its overall ecological potential assessment could be moderate, poor or bad depending on the severity of the impact.

# RBMP Water body information sheet for water body 100222 in Tay

This overall classification of status is made up of many different tiers of classification data. A complete set of classification data for 2008 is shown at the end of this document.

## Targets for the future status of this water body

We have set environmental objectives for this water body over future river basin planning cycles in order that sustainable improvements to its status can be made over time, or alternatively that no deterioration in status occurs, unless caused by a new activity providing significant specified benefits to society or the wider environment.

For this water body we have set the overall environmental objectives for the first, second and third River Basin Management Planning (RBMP) cycles as:

|        |                           |      |      |      |
|--------|---------------------------|------|------|------|
| Year   | 2008                      | 2015 | 2021 | 2027 |
| Status | Good ecological potential | Good | Good | Good |

The current status of the water body meets the requirements of the Water Framework Directive, thus we must ensure that no deterioration from good status occurs, unless caused by a new activity providing significant specified benefits to society or the wider environment.

## Pressures and measures on this water body

The pressures listed below contribute to this water body's failure to meet good ecological status or potential. River basin planning allows us to plan improvements for particular parameters over time. We have collaborated with others to identify measures which will act to protect or improve our water environment in order that all water bodies reach good status over successive RBMP cycles.

The following table shows our collated information on the pressures on this water body, their causes and the measures which could be introduced to mitigate their effects. We have also indicated the current funding status of the measure; with projected measures being potentially funded and agreed measures having funding in place. Finally, we have included information on the potential or actual owner of the measure, the date it will be effective and information on the justification for extending the deadlines or for setting an alternative objective, where appropriate.

| Pressure                  | As a Result of   | Assessment Parameter    | Objective    | Reasons for Failure |
|---------------------------|--|-------------------------|--------------|---------------------|
|                           | Measure  | Funding                 | Owner        | Effective date      |
| Morphological Alterations | Production of renewable electricity (NB nuclear and pumped hydro are not renewable forms of electricity) | Single pressure - Shore | Good by 2015 |                     |

water body 100222 in Tay

| Pressure    | As a Result of  | Assessment Parameter                | Objective                    | Reasons for Failure |
|-------------|---|-------------------------------------|------------------------------|---------------------|
|             | Measure   | Funding                             | Owner                        | Effective date      |
|             | generation) Impounding<br>- weir / dam  |                                     |                              |                     |
|             | Improve Modified Habitat  | Neither Agreed nor Projected        | Scottish and Southern Energy | 31/12/2007          |
| Abstraction | Production of renewable electricity (NB nuclear and pumped hydro are not renewable forms of electricity generation) | Change in the outflow from the lake | Good by 2015                 |                     |
|             | Control pattern/timing of abstraction (Hands off flow/ utilisation of storage (new/existing))                       | Agreed                              | Scottish and Southern Energy | 31/12/2007          |

### Future work

Additional work to identify pressures and to develop and implement measures to mitigate their impacts will continue over subsequent river basin cycles.

### Complete classification for this water body in 2008

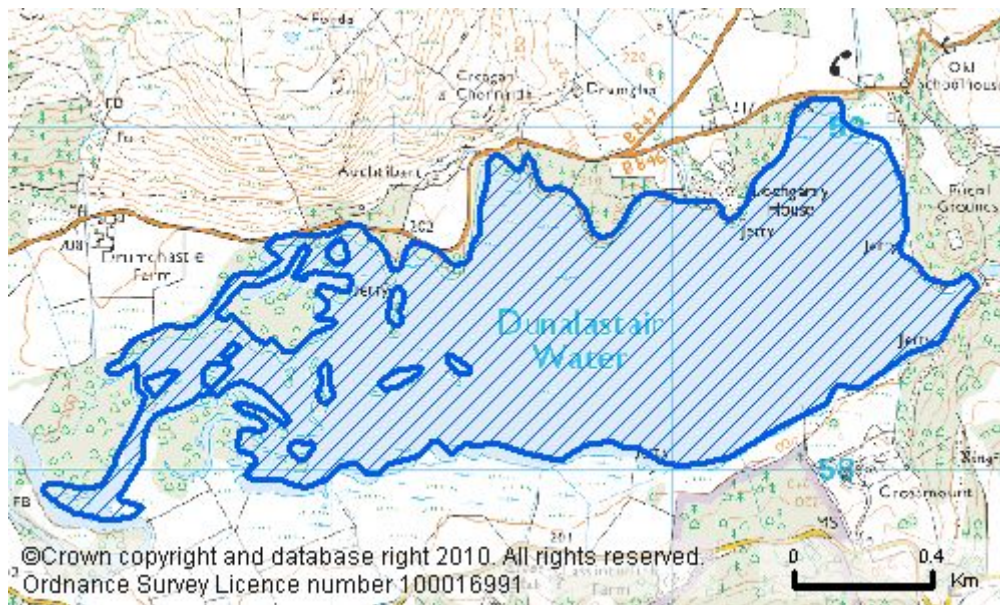

| Parameter                  | Status                    | Confidence of Class |
|----------------------------|---------------------------|---------------------|
| OVERALL STATUS             | GOOD ECOLOGICAL POTENTIAL | MEDIUM              |
| Pre-HMWB status            | Bad                       | Medium              |
| Overall chemistry          | Pass                      | Low                 |
| Priority substances        | Pass                      | Low                 |
| Lead                       | Pass                      | Low                 |
| Overall ecology            | Bad                       | Medium              |
| Physico-Chem               | Good                      | High                |
| Dissolved Oxygen           | High                      | Low                 |
| Total Phosphorus           | Good                      | High                |
| Salinity                   | High                      | High                |
| Acid Neutralising Capacity | High                      | High                |
| Biological elements        | High                      | Medium              |
